Tech+ *Society* Breakfast

Where founders, investors and leaders
meet to reflect on the future impacts
of technology on society

Nov. 27

Algorithmic Fairness:

How to make our algorithms consistent with public expectations

Machines are already used for effective evaluations (e.g. credit scoring or job applications), by detecting patterns in large datasets. However, data often contain biases. As a result, that automatic systems can further perpetuate structural inequalities and discriminations. How do we detect those and deal with them transparently when designing algorithms?

Speakers

Anna Jobin
Researcher
ETHZ

Are you convinced that technology can have tremendous positive impacts on society? We are too! We need to understand these possible impacts and their alignment with the interests of companies, individuals, and society as a whole.

Join the regularly recurring Tech and Society Breakfast to convert these goals into reality...

... coming together with like-minded start-up founders, tech leaders, and investors for discussions and networking.

... contribute to a broader perspective for leaders in their day-to-day business decisions.

The Tech and Society Breakfast includes short inputs from guest speakers followed by discussion.

Daniel Neubig
AR Technical Lead
Ergon Informatik AG
